

## Java™ for Programmers Course Overview

### Course Overview:

Java™ for Programmers introduces the Java™ Programming Language to the experienced programmer. Java™ for Programmers is a fast-paced practical introduction to the Java™ Programming Language. This course thoroughly covers the core Java™ Language, including exception handling, networking and File I/O.

### What You'll Learn:

After completing our Java™ for Programmers class, you can expect to be able to develop Java™ applications with a sense of good design and a thorough understanding of the Java™ Language, its syntax and available packages, as well as a thorough understanding of Object Oriented programming concepts and strategies, such as inheritance, polymorphism and encapsulation. By the end of this course you will be competent in Exception Handling, File access with Java I/O, Multithreading.

### Prerequisites:

In order to complete this course, students should have at least 6 months programming experience, preferably in an Object-Oriented language. This is a fast-paced course that assumes an underlying understanding of common programming structures and concepts. Students without prior Object Oriented programming experience, or students who prefer a slower pace, should consider our Introduction to Java™ class.
